EPS Growth vs ROE (Capital Efficiency Map)

Credit Score Distribution (Stability vs Risk)

Capital Quality Trend (Profitability vs Leverage)

Average Credit Score

Measures overall creditworthiness of companies in the portfolio. Interpretation:

- Higher score = stronger balance sheet & lower default risk
 - Lower score = weaker financial profile
- Used to compare credit quality across sectors and companies

Investment Grade Exposure (%)

Percentage of companies rated Investment Grade (BBB- or above). Why it matters:

- Higher % = lower portfolio credit risk
- Lower % = higher exposure to speculative / high-yield names

Average ROA

Measures operating efficiency and profitability.

Higher ROA indicates:

- Strong asset utilization
- Better management efficiency

Thresholds used:

- $> 15\%$ → Strong profitability
- $< 8\%$ → Weak profitability

Average Debt-to-Equity

Measures financial leverage. Interpretation:

- Lower ratio = conservative capital structure
- Higher ratio = higher financial risk

Rule of thumb:

- $< 0.6 \rightarrow$ Healthy leverage
- $> 0.6 \rightarrow$ Leveraged balance sheet

Average EPS

Average earnings per share across the portfolio.

Higher EPS indicates:

- Strong earnings capacity
- Better shareholder returns

Used alongside ROA to assess earnings quality.

Number of Companies

Total unique companies included in the portfolio after all active filters are applied.

Company Quality Classification Logic

High Quality:

- ROA > 15%
- Debt-to-Equity < 0.6
- Investment Grade rating

Leveraged Quality:

- ROA > 15%
- Debt-to-Equity $\geq$ 0.6

Underutilized:

- ROA < 8%
- Debt-to-Equity < 0.6 High Risk
- : • Low ROA and/or high leverage

Note: Some buckets may show zero counts if no com
